PRESSURE BOOSTER / AIR AMPLIFIER

The air amplifier compresses air or nitrogen from a standard pressure of 10 bar max. to the desired outlet pressure of 60 bar max. This is realised by cylinders with different ratios - simple, safe and economical. No electrical installation is required and there is no energy consumption once the final pressure has been reached. Service life 3 million cycles, full load operation 12 min max. per hour. Description

lubricated, unlubricated and 50 µm filtered compressed air or nitrogen

Mounting position

Media

Power device

Cylinder with integrated reversing valve, check valve and silencer. The pressure will be increased selective to the consumer. No energy consumption once final pressure is attained.

Drive pressure PA system air to drive the air amplifier, 2...10 bar

Supply pressure P1 max. 12 bar, for instance nitrogen or compressed air

Outlet pressure P2 amplified outlet or operating pressure of 20 bar to 100 bar maximum Continuous operation 20% of the diagram values should maximally be realised at permanent running

Temperature range 0 °C to 60 °C / 32 °F to 140 °F Sound level max. 79 dB (A) Material NBR/Buna-N Body: aluminium Seals:

Dimensions Weight Connection Transmisson Flow P_2 Order В C number Α thread ratio rate max. mm mm mm $P_A: P_2$ I/min bar kg

P₁: max. 12 bar, P₂: 100 bar 50 - 1200 I/min
