

Description	The pressure booster doubles the system pressure of e.g. 5 bar to an outlet pressure of 10 bar. The pumping force of two cylindrical chambers compresses the air down to the set outlet pressure within the third chamber while the fourth chamber is vented. Upon reaching the outlet pressure it is turned off, when falling below it is turned on automatically. Pressure boosters are used for occasional demand of compressed air.	
Media	lubricated and 50 µm filtered compressed air	Mounting position any
Drive	double piston intensifier, ratio 1:2	Reversing, check and switching valves provide for automatic control. Life time approx. 20 million switching cycles.
Inlet pressure P₁	2...8 bar	Outlet pressure P₂ 4...16 bar
Air tanks	are recommended. They compensate pressure fluctuations and allow short-term high volume flows. See circuit below.	
Tank filling time	is a measure of booster performance. To reduce the filling time of the tank, it has to be pre-filled with input pressure P ₁ . See circuit below.	
Temperature range	-5 °C to 50 °C / 23 °F to 122 °F	
Material	Cylinder: anodized aluminium	seals: NBR/Buna-N

Dimensions			Weight kg	Connection thread G	Transmission ratio P _A : P ₂	Flow rate l/min*1	Fill time 10l-tank s	Pressure range bar	Order number
A mm	B mm	C mm
